... & PLANES

32028 is good to go after having its fuel pump replaced due to an oil leak.

55044 will be having its 100 hour/annual this week, having once again flown almost as much as 028 in August. The radio issue affecting reception in lower frequencies seems to have been fixed with a thorough cleaning of the connections on the antennae, and plans continue towards installing an engine heat gauge.

"Weather Challenge"

Topic: Weather Challenge
On Tuesday, September 17, 2013 at 7:00 PM

Location:
Marriott Hartford Downtown
200 Columbus Blvd.
Hartford, CT 06103

Select Number:
NR0350992

Description:
You don't need a meteorologist-level understanding of weather to be a good pilot—though to judge from some of the educational materials out there, you might think so. Skew-T diagrams and moist adiabatic lapse rates are all well

and good, but for most of us it's the *practical* stuff that matters.

With that in mind, our new seminar is aimed at bolstering your real-world weather wisdom—and having a little fun, too. As with our recent "Chart Challenge" seminar, we'll put your knowledge to the test, quizzing you on everything from METAR/TAF decoding to real-world weather scenarios. Along the way we'll cover:

- The most important weather resources for pilots
- Critical tie-ins with risk management and decision making
- Weather-related accidents that didn't need to happen
- The promise (and pitfalls) of cockpit weather

Unlike reading a history book, you can actually fly a mission back in time and feel the might of this magnificent machine, just as those brave young men did more than 60 years ago.

"Starved and Exhausted!"

Topic: Preventing Fuel Starvation, Fuel Exhaustion and Fuel Mis-Management Accidents

On Monday, September 23, 2013 at 7:00 PM

Location:
Business Aircraft Center
81 Kenosia Ave
Danbury, CT 06810

Select Number:
EA6351638

Description:

Sailplane pilots and space shuttle pilots are trained to execute normal landings without power. However, powered aircraft pilots normally have the option of a go-around, except, when they run out of fuel! Does this ever happen? In the past decade, more than 1,700 accidents have resulted from poor fuel management. At this exciting safety briefing we will examine a few fuel related accidents and discuss mitigation strategies that will prevent them from happening to YOU! Attendees are encouraged to bring any "there I was" stories to share, I will tell you mine. A **buffet dinner will be served at 6PM, generously provided by the Business Aircraft Center!**
